

KB200-01 Baby changing station

The wall-mounted baby changing station provides a steady surface for baby care. The concave base and additional seat belts further ensure safety. The spring mechanism allows for easy and smooth opening and closing of the baseboard.

Hooks are mounted into the base for easy access to care bags. The base also houses a built-in disposable protective paper dispenser.

The design of the hinges eliminates the threat of fingers getting stuck.

The station is made of polyethylene plastic which rejects odours and bacteria. The closed structure of the baby changing station also helps keep it clean.

Load-bearing capacity 15 kg. Depth when opened 520 mm, when closed 102 mm.

Mounting hardware included. Disposable protective papers sold separately: KB150-99

Product Information

Width	890 mm	Color	grey
Length	-	Rail color	-
Height	550 mm	Material	polyethylene
Depth	102 mm	Handedness	-
