

CARE INSTRUCTIONS

GAIUS LED

The surfaces of the luminaires should be cleaned regularly as dirt on the surface of the luminaires affects the level of lighting.

Cleaning

Wipe with a cleaning cloth moistened in soft water or mild detergent water. Avoid using a microfiber cloth. Use a neutral water-diluted cleanser (pH 6-8), such as hand dishwashing detergent. Dry with a clean, soft cleaning cloth. The surface should not be scrubbed dry.

Plastic surfaces

For thorough washing of plastic surfaces, antistatic plastic cleaning and conditioner cloths are also suitable. Antistatic acrylic suitable plastic cleaning and conditioner reduces the electrostatic charge of the acrylic surface and thus the attachment of dust and makes the plastic surface easier to care for.

The plastic surfaces of the lamps are PMMA acrylic, for which the harmful substances include acetone, methanol, vinegar and xylene, as well as abrasives. Do not use these substances in cleaning.
