The New Arctic 17

We have 30 years of experience with products which provide the elderly and disabled with independence, safety and quality of life, and we have used this experience to design our new Arctic 17 chair. However, we are not afraid to innovate and develop, and we never stop working to improve our products. By working closely with therapists and users, we have raised our tried-and-tested Arctic 17 to a new level.

In the new Arctic 17, we have developed a new seat cushion which has two layers of foam to provide better pressure relief and even more seating comfort. The riser recliner chair is suitable for anyone who needs help getting out of a chair, which is why we have now improved the chair's flexibility by making it available in more widths. We have also provided more adjustment options and a wide range of accessories. This means that we can be sure that this chair will meet your needs, even if they change over time. The riser recliner chair is easily adjustable and can be converted from vertical lift to tilt lift. This applies to all models except the Arctic 17/60.

We want you to be independent at home, which is why it is important for our products to be uncomplicated and user-friendly. That is why we have simplified the controls of the new Arctic 17, with contrasting colours, pictograms and text which makes the chair's functions highly visible and easy to understand.

Safety is one of the most important things we can offer you as a user of our products. That is why we have improved our lifting mechanism to make the chair even more robust, stable and safe.

A safe lift will help you get up out of the chair and get on with your life. We consider participation to be one of the most important factors in enjoying a good quality of life, but we also know that well-being and comfort are vital. With the latest foam technology, you can sit down with a nice cup of coffee or a book and enjoy the comfort provided by a foam which gives excellent pressure relief and support for long periods. For even more comfort, we recommend the reclining model, which not only reclines safely back into the resting position, but also all the way back into a lying position.

With a USB charger in the chair, you can have your phone, tablet or another welfare technology device, easily accessible, even while they are charging.

The Arctic chair has a modern yet timeless appearance to look good in any home. The chair has clean lines and shaded fabric which will look new, even after many years of use. We have used fabric, leather and oak in the design, familiar to all of us from the furniture and interior design market, which means that the chair will become a natural part of your room.

Technical information

Arctic 17 Sortiment

NYHET SYNCHRON-FUNCTION: Foot cushion and back move synchronously so that the hip is minimized when changing position. Reload single legs while watching TV or reading.

The **Standard**-models have individual backrest and footrest controls. These chairs come with hand controls with contrasting colours to make operating the various functions easy.

Suitable for anyone who needs a riser recliner chair.

The fully **Reclining (Tilt)**-models are our most advanced models. These chairs can be reclined all the way back into a fully reclined position for optimum relief.

Suitable for anyone who spends large parts of the day in the chair and need variations in positional relief.

The **Synchronised**-models have co-ordinated electric backrest and footrest functions. These chairs come with an extremely simple handset with just two buttons.

Suitable for anyone who needs the chair's functions to be as easy to operate as possible.

Particularly suitable for people with cognitive problems.

All the models (except the 17/60) can easily be converted from tilt lift to vertical lift.

Description
Transparent rubber button placed over the remote control. This raises the buttons and makes them easier to operate for the visually impaired.

Adapter to change angle of backrest

Article No.
28839
Description
The adapter pushes the back further in all positions. The back is pushed an average of 5 degrees forward

Independence • Savety • Quality of life

HEPRO AS is a modern, forward-thinking specialist company which develops, manufactures and sells high-quality aids and welfare technology, all of which is thoughtfully designed. Our head office is in Rognan, at the innermost part of the Saltenfjord, surrounded by mountains and dramatic natural scenery.

The company was established in 1987 and has many years of experience in developing products and solutions designed to make life easier for our customers. Our vision is to give our customers the opportunity to be independent, active participants in their own lives, and to live at home for longer. Because of our high quality, fast response times and short lines of communication, Hepro is the obvious first choice for our customers.

We work closely with ergotherapists to develop products and solutions tailored to our customers' needs to help them with mobility, balance, comfort and hygiene. Our aim is to provide safety, independence and an increased level of activity through functional products designed around the needs of our customers. We get to know our users and make the effort to deliver products that suit the needs of the individual
